COMPANY OVERVIEW

Oscillating Systems trading as **OST-Africa (Pty) Ltd** has been established as a company within the industrial sector since 1985. In 2008 OST-Africa became part of the Bearing Man Group

Annual turnover in excess of billions

A large growing staff complement

A major company within Invicta Holdings Limited.

A highly credible BEE rating

MISSION STATEMENT:

Oscillating Systems strives to design and manufacture maintenance-free, premium- efficient products that are safe and reliable to operate. Our products are engineered to perform efficiently in the harshest applications and environments, delivering the longest possible service life.

Our dedicated team provides innovative solutions through value-driven and application- focused engineering. This commitment, together with our exceptional service, has established Oscillating Systems as a preferred supplier to major mining houses and leading original equipment manufacturers.

VISION STATEMENT:

To set the global standard for maintenance-free, high-performance engineered solutions in the toughest industrial environments.

OST's product portfolio is divided into four specific categories – vibrating range, transmission range, material-handling and standard products.

The main activity of OST is to design, develop and manufacture new products or applications using the Neidhart system concept which was first patented by Herman Neidhart in 1948.

OST has used the Neidhart concept in a vast range of products and patented this invention in 1991 called the self-tensioning motorbase.

This unique design has, for the first time, enabled users to enjoy maintenance free operation from V-Belt drives.

Since then we strived to value engineered the product constantly. We also export our products worldwide.

We are the sole distributors of the Visam vibrator motor in Africa. These are imported from Italy. We deliver high quality, maintenance free, engineering solutions within the mining, process, farming and pharmaceutical industries to name but a few.

Through personal touch and excellent client service we aim to form long term relationships. OST has remained a force to be reckoned with and will continue paving the way for service excellence.

PRODUCT RANGE

MATERIAL HANDLING

Oscillating Systems specializes in engineered solutions for material handling in mining, quarry, and timber industries. Our range includes:

- Dynamic Impact Beds - Custom-designed transfer chute beds that absorb impact, protect conveyors, and reduce wear in harsh operating environments.
- HIT System (High Impact Torsion Bar) - Combines a heavy-duty idler frame with high-impact torsion arms to absorb material impact at discharge chutes. Fit all belt sizes and standard SABs stringer systems, with custom designs available.
- Skirt Clamps - Unique, fastener-free clamping device allowing variable clamping forces. Simple installation minimizes maintenance and total cost of ownership.
- Duff Feeders - Collect and convey duff from under belt scrapers to collection points while allowing easy access for conveyor maintenance.
- Belt Scrapers - OST offers a wide range of belt scrapers, including Primary, Secondary, Tertiary, Bias, Wiper/Return, and a budget range. All units feature a unique suspension system for consistent blade-to-belt contact, ensuring efficient cleaning and extended belt life across all conveyor applications.
- Niche Screens & Feeders - "Screen Doctor" is OST's dedicated brand for the design and manufacture of high-quality screens and feeders. Serving the food, industrial, mining, and other sectors, this range delivers reliable, application-specific solutions tailored to customer requirements.

VIBRATING RANGE

- Vibrator Motors - Sole importers
Oscillating Systems is the exclusive distributor of Visam brand vibrator motors imported from Italy. These high-quality motors are supplied to leading screen and vibration equipment manufacturers, mining houses, and process industries across South Africa, providing reliable performance and industry-trusted solutions.
- Screen Mounts - International Distribution
Oscillating Systems manufactures a range of screen mounts designed to replace traditional springs used for vibration absorption on process equipment. Offering a guaranteed 3-year service life, these mounts deliver superior durability and performance. This product range is distributed worldwide, providing reliable solutions for mining, processing, and industrial applications.

TRANSMISSION RANGE

- Chain & Belt Tensioners - International distribution
Oscillating Systems manufactures a range of chain and belt drive tensioners, distributed in South Africa by Bearing Man Group (BMG) and exported to the USA and Europe. These tensioners are engineered for reliable performance and long service life.
- Self-Tensioning Motor Base (STM Base) - International distribution
Developed and originally patented by OST in South Africa, the STM Base is designed for all V-belt drive systems to adjust speed efficiently. Although the patent has since expired, the STM Base continues to be recognized for its cost-saving benefits and is specified by leading mining houses in South Africa and distributed worldwide.
- Efficiency base (E-Base) - International distribution
OST-Africa has developed the Efficiency Base (E-Base) system, which is a precision-engineered belt-drive base system, developed to optimise tension, alignment and efficiency in pump and motor applications within the mining and other applicable industries.

● STANDARD PRODUCTS

- Standard products - International distribution
Oscillating Systems offers a comprehensive range of standard products, including Anti-Vibration Mountings, Oscillating Mountings, and Rubber Suspension Units, designed to reduce vibration, protect equipment, and improve operational reliability across industrial and mining applications.

ENGINEERING, WORKSHOP & CERTIFIED MANAGEMENT CAPABILITIES

Oscillating Systems operates a fully equipped workshop supported by an in-house engineering and draughting office, enabling us to design, manufacture, assemble, and test equipment under one roof. This integrated capability ensures technical accuracy, quality control, and efficient turnaround times for demanding mining and industrial applications.

Our operations are supported by internationally recognised management systems, including ISO 9001:2015 (Quality Management), ISO 14001:2015 (Environmental Management), and ISO 45001:2018 (Occupational Health & Safety), reinforcing our commitment to quality, safety, and sustainable manufacturing.
